Change your perceptions of video laryngoscopy
It is time for new perspectives in video laryngoscopy

Until now, one thing has been true of modern visualization of the respiratory tract: high quality precludes cost efficiency. Now it is time to change that perspective.

With UESCOPE®, you’ll think of video laryngoscopy of the future in a whole new light. It’s high quality across the board and highly flexible thanks to its open modular design. Let’s not forget it’s highly efficient so treating patients is designed to be considerably more economical.

Every model combines ergonomic comfort design with cutting edge imaging technology. Additionally, every size of blades comes with optimized blade angulation, enabling desirable anterior view of respiratory tract. This combination creates the ideal solution for all intubations - whether for routine procedures or hard to reach difficult airways.
Satisfactory anterior view
Slightly pointing-up camera and angulated blade enable desirable anterior view of the respiratory tract with no blind zones.

Mobile use
Equipped with a rechargeable lithium battery, the video laryngoscope can be used for longer than 90 minutes. That's why there is no need to bother with troublesome cables.

Sharp images on a freely movable display
The 2.5 inch color display produces sharp, bright images with a field of view of 60°. A swiveling monitor allows for easy adjustment to suit the physician's viewing angle.

Easy and precise use
The UESCOPE® video laryngoscope design adheres to the strictest ergonomic requirements. Weighing only 180 grams, it is extremely light and fits perfectly in the shape of your hand.

Recording capability
Optional on-board recording capability offers the most convenient record keeping for quality control and assurance.

The VL400 series can be adjusted for each procedure thanks to its interchangeable components. There are 5 reusable sizes, 3 disposable sizes, and 1 video stylet component to choose from to fit anyone from neonate to obeses.
Only those who see things differently can do things differently. Like UE.

UE is a young, dynamic company that develops advanced solutions in airway management. Since our founding in 2010, we’ve strived relentlessly for change. We aim to continually improve the quality of life for patients and the day to day physician experience.

Thanks to a continuous quest for new approaches and uncompromising customer orientation, we create holistic technologies that meet the highest standards in modern anesthesia and emergency medicine. That’s true of diagnostics, application and quality as well as speed, efficiency and economy.
